

Machine Learning Foundations

Course syllabus · Mindfull Methods

Level: Intermediate · Duration: 8 weeks · Format: Online

Pricing: INR 16,999 · Cohort-based

Overview

A project-first introduction to machine learning with Python and scikit-learn. You will explore data responsibly, train and compare models on tabular datasets, and finish with a mentor-reviewed capstone you can explain to both technical and non-technical audiences.

What you'll learn

- ? Prepare datasets and evaluate model performance responsibly
- ? Train and compare common ML algorithms for tabular data
- ? Explain model results to stakeholders in plain language
- ? Deliver a capstone notebook and presentation

Weekly milestones

Week 1

- ? ML landscape
- ? Python refresh
- ? Data exploration

Week 2

- ? Feature engineering
- ? Train/test splits
- ? Baselines

Week 3

- ? Regression models
- ? Evaluation metrics
- ? Error analysis

Week 4

- ? Classification
- ? Confusion matrix
- ? Threshold tuning

Week 5

- ? Model selection
- ? Cross-validation
- ? Overfitting

Week 6

- ? Capstone scoping
- ? Milestone review
- ? Ethics basics

Week 7

- ? Capstone build
- ? Mentor feedback
- ? Iteration

Week 8

- ? Final presentation
- ? Portfolio packaging
- ? Next steps
